Overview

Phosflex® 31L is a substituted triaryl phosphate ester made exclusively from synthetic feedstocks. It has excellent flameretarding characteristics, which are typical of the triaryls. This flame retarding efficiency permits back-blending with non-flame retarding plasticizers, resulting in favorable economics and wide flexibility to formulators.

While used primarily in PVC formulations, Phosflex® 31L finds compatibility and utility in other resin systems as well.
